(54) Title: GAMING TABLE

(57) Abstract: There is described a gaming table (3) having a playing surface (9) in which a display panel (6) is positioned below the playing surface of the gaming table, and is operable to display moving and/or still images which can be viewed through the playing surface by players at the table. A diffuser screen (8) may be placed between the playing surface (9) and the display panel (6). If the upper surface of the display panel (6) is uneven, a cover sheet (16) may be placed over the display panel (6) to provide a smooth substrate for the diffuser screen (8) and/or the playing surface (9). Embodiments are described in which a projector projects an image onto the undersurface of a screen mounted below the playing surface so that the image is visible through the playing surface.
