

[ABSTRACT]

BED SYSTEM

According to an embodiment, a bed system includes an acquisition unit and a display. The acquisition unit acquires a plurality of user interface device information from a plurality of user interface devices. The display displays a plurality of images corresponding respectively to the plurality of user interface devices on a single screen on the basis of the plurality of user interface device information acquired by the acquisition unit. One set of the plurality of user interface device information includes state information including at least one of bed state information relating to the state of one bed among a plurality of beds and user state information relating to the state of a user of the one bed among the plurality of beds. One image among the plurality of images includes a state display corresponding to the state information. When the state information is abnormal, the first display displays a warning display on the one image among the plurality of images. Thus, a bed system having improved usability is provided.
