(54) Title: A PLANT POT AND A METHOD OF PLANTING

(57) Abstract: A plant pot (100) having perforations which provides relief from root (302) rot in water-logged soil. Furthermore, the plant pot (100) allows plant roots (302) to grow out of the base of the pot (100) through the perforations to prevent root (302) congestion within the pot (100). This also allows access to the roots (302) for pruning and maintenance. Furthermore, the plant pot (100) is configurable to be leak-proofed or water draining, to cater to different planting media which may require the pot (100) to contain water or the pot (100) to be drained.
