

Abstract

Online Voting Methods and Systems

An online voting method comprises receiving, at a first server, a log in request from a voter at a first interface implemented by the first server; determining, on the first server, if the voter is registered to access online voting and if the voter is registered to access online voting, providing the voter access to a second interface implemented on a second server; receiving, through the second interface implemented on the second server, a vote indication from the voter; and sending an indication of the vote indication to an election management server.
