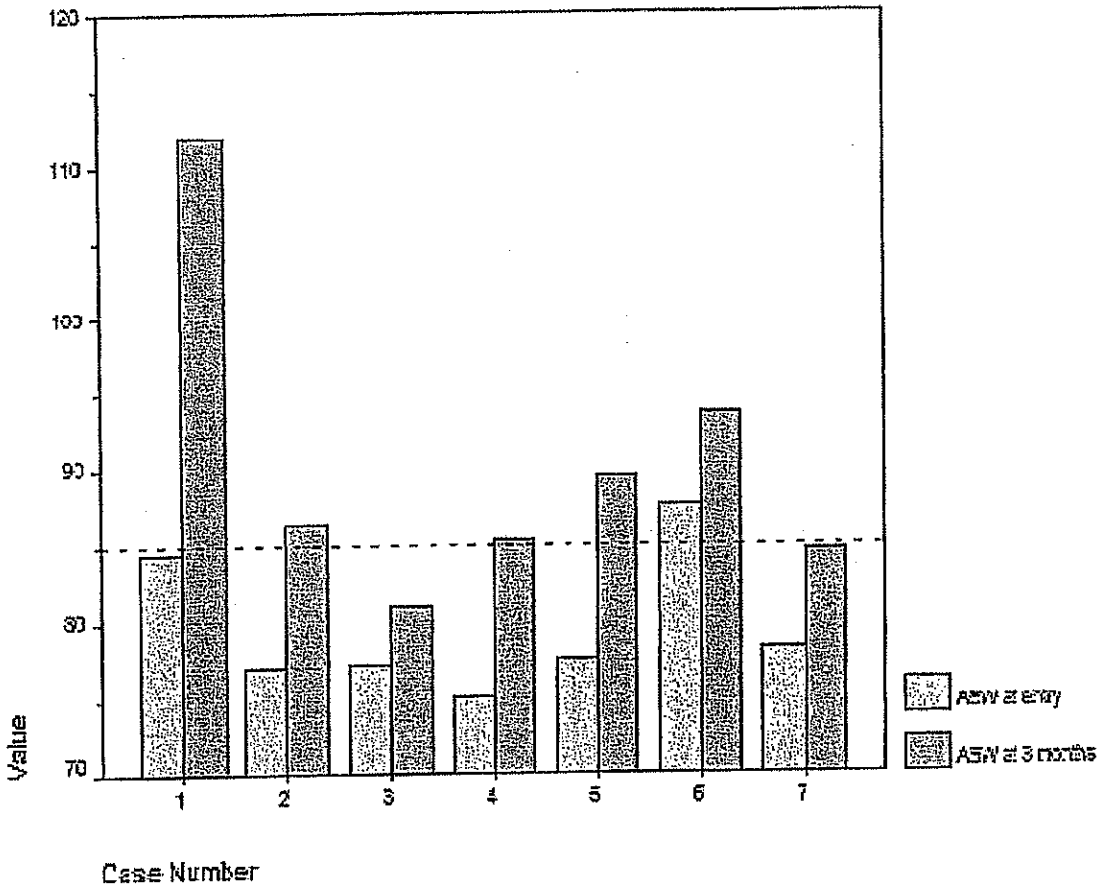

Figure 1

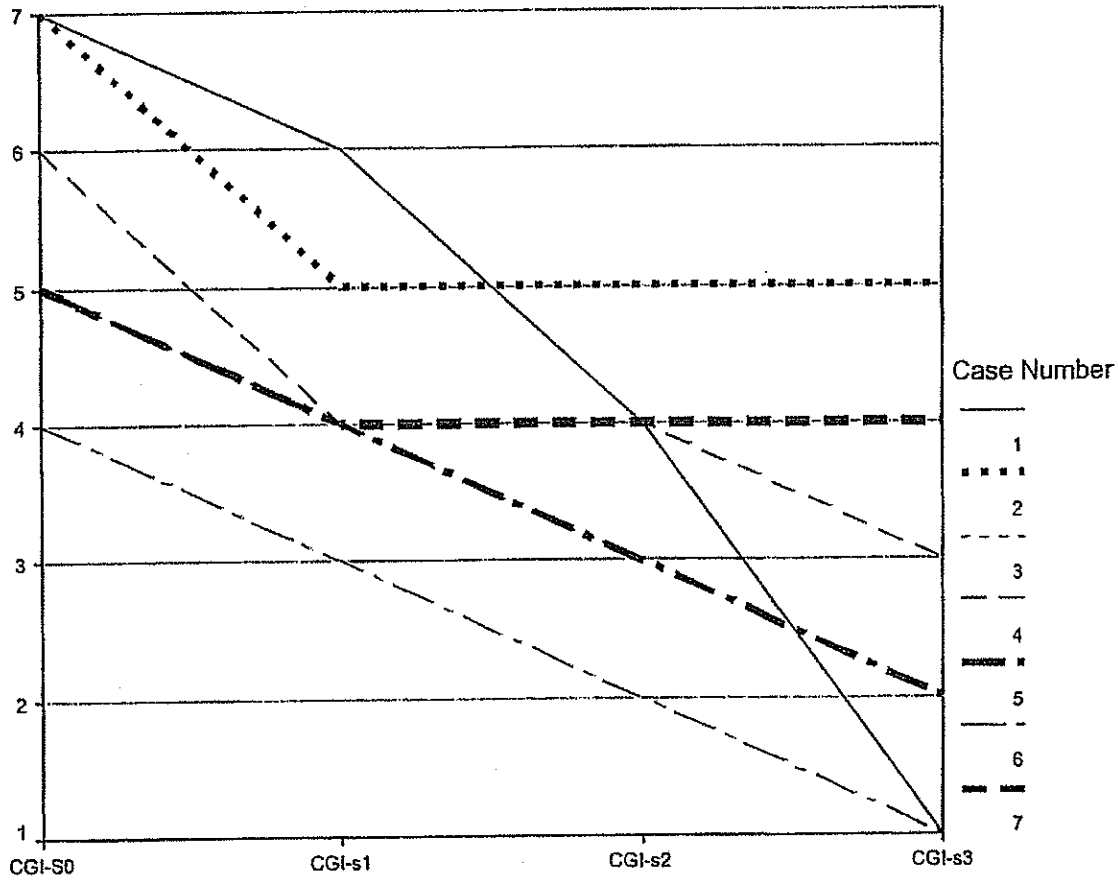

The participants' percentage for average body weight for height (ABW) before and after treatment

(Diagnostic criterion for anorexia nervosa is below 85% of ABW)

Figure 2

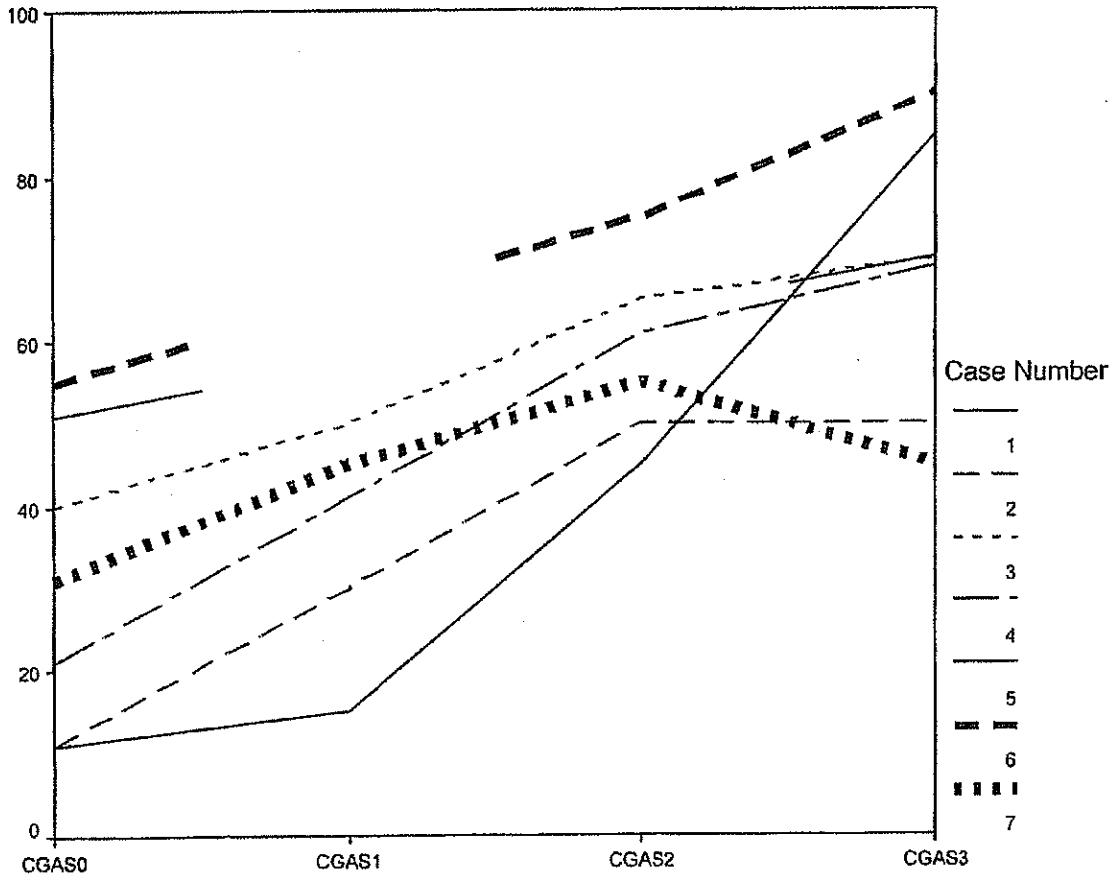

Changes in rating of clinical severity according to CGS during treatment

(1=normal, not ill; 2=borderline ill; 3=mildly ill; 4=moderately ill;

5=markedly ill; 6=severely ill; 7=amongst the most severely ill)

Figure 3.
Changes in global functioning during the treatment (C-GAS)

(0: dangerously ill → 100: superior psychosocial functioning in all aspects of life)

Figure 4.
Changes in BDI-2 during treatment

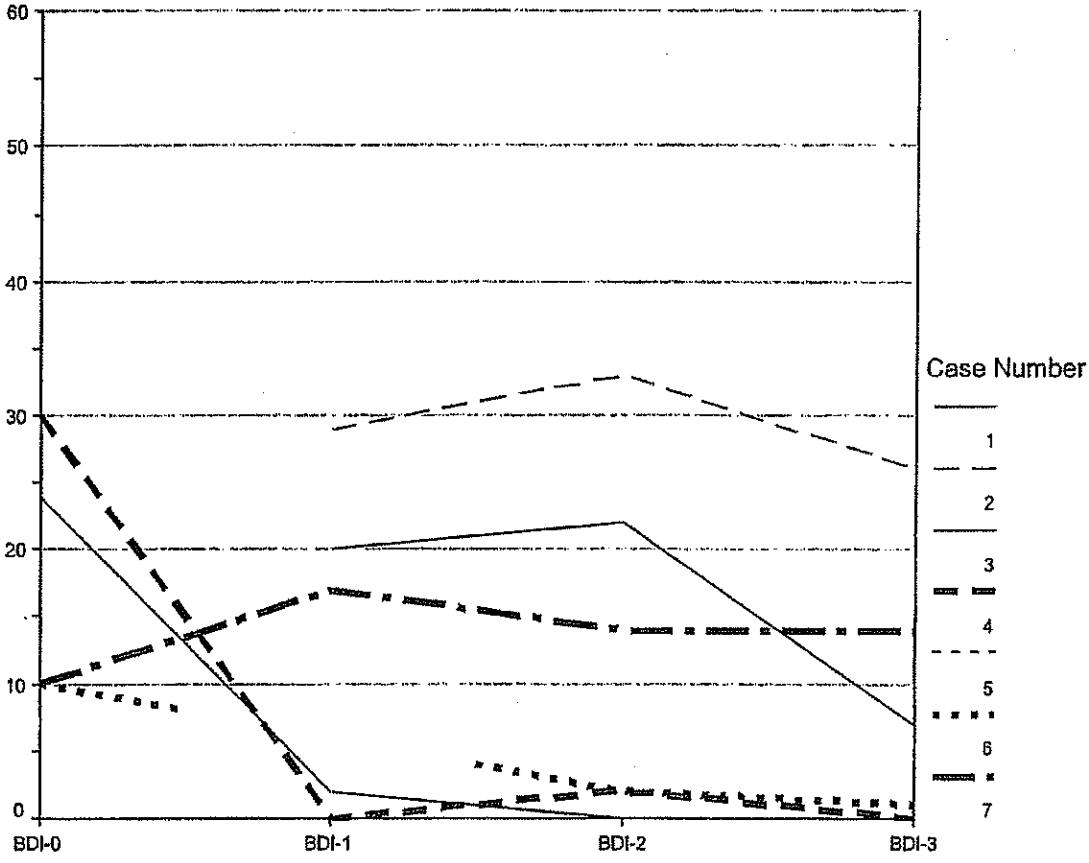

Figure 5
Changes in EDI-2 during treatment
