SYSTEM AND METHOD FOR CORRELATING MESSAGES WITHIN A WIRELESS TRANSACTION

ABSTRACT

A method and system for correlating messages within a wireless transaction, each of the messages requiring a unique message identifier, the method having the steps of: creating a transaction identifier, the transaction identifier being the same for related messages; and adding to the transaction identifier a message index, the message index corresponding to a number of a message within a transaction, whereby the transaction identifier and message index form the unique message identifier for each of the messages.
