(54) **Title:** METHOD AND APPARATUS FOR CODE VIRTUALIZATION AND REMOTE PROCESS CALL GENERATION

FIG. 3

(57) **Abstract:** A system and method for code virtualization and remote process call code generation. The method including installing a software development kit (SDK) on a user device and selecting a remote process on a remote server, the remote process correlated to at least one remote service. The method also parsing parameters from pre-defined fields for the remote process and generating by at least one virtual code provider (VCP) on the remote server, a code snippet to call the remote process. The method inserting the code snippet into a local code base on the local user device such that the inserted code snippet calls the remote process with the installed SDK.
