(54) Title: IMAGE DISPLAY SYSTEM

(57) Abstract

The present invention relates to an image display system for displaying images to passengers in a vehicle, for example a train. The image display system comprises an image display system comprising a series of images (1) for disposal along the path of a vehicle; discharge lamps (11) for briefly illuminating individual images; a plurality of control units (3). The control means comprises a detector (6) for detecting marking on the vehicle; a counter chain (7) for measuring a time difference as a measure of the speed of the vehicle and a microprocessor (8) for controlling the lighting of said at least one image in response to detection of the marking to illuminate each individual image repeatedly for respective windows of the vehicle taking into account the speed of the vehicle and the positions of the respective windows of the vehicle.
