

ABSTRACT

There is provided an information recording apparatus 1 which will not suffer from circuit disconnection even when it is folded and unfolded repeatedly. The information recording
5 apparatus 1 includes a lowermost substrate 30b and a conductive circuit 18A on the lowermost substrate 30b. The lowermost substrate 30b includes a first substrate 91 and a second substrate 92. A first conductive circuit 93 on the first substrate 91 and a second conductive circuit 94 on the second substrate 92 are
10 connected by a flexible circuit connector 80 disposed over a folding line 64. The flexible circuit connector 80 includes an insulating substrate 81, a one-side terminal section 83 provided on one side of the insulating substrate 81, and an other-side terminal section 84 provided on the other side of the insulating
15 substrate 81.
