(54) Title: STEERABLE UNDERWATER PLOW WITH MOVABLE BODY MEMBER		
(57) Abstract A steerable plow (10) configured for towing in a direction along a seabed (12) comprises a body (16) and a soil cutting member (18) slidably connected to the body. The soil cutting member defines a cutting vane (32) for cutting a trench in the seabed. The body includes two skids (20) and a cross member (24) spanning the two skids. The skids are spaced apart from each other and from the soil cutting member to stabilize the plow (10). A motive element (36) is included to move the soil cutting member (18) relative to the body (16), and a steering control included within the head (19) receives commands from a remote location to control the motive element. At least one towing member (28) is included to attach the plow (10) to a tow cable (30).
