

~~Figure 4.0~~ Figure 4.0b

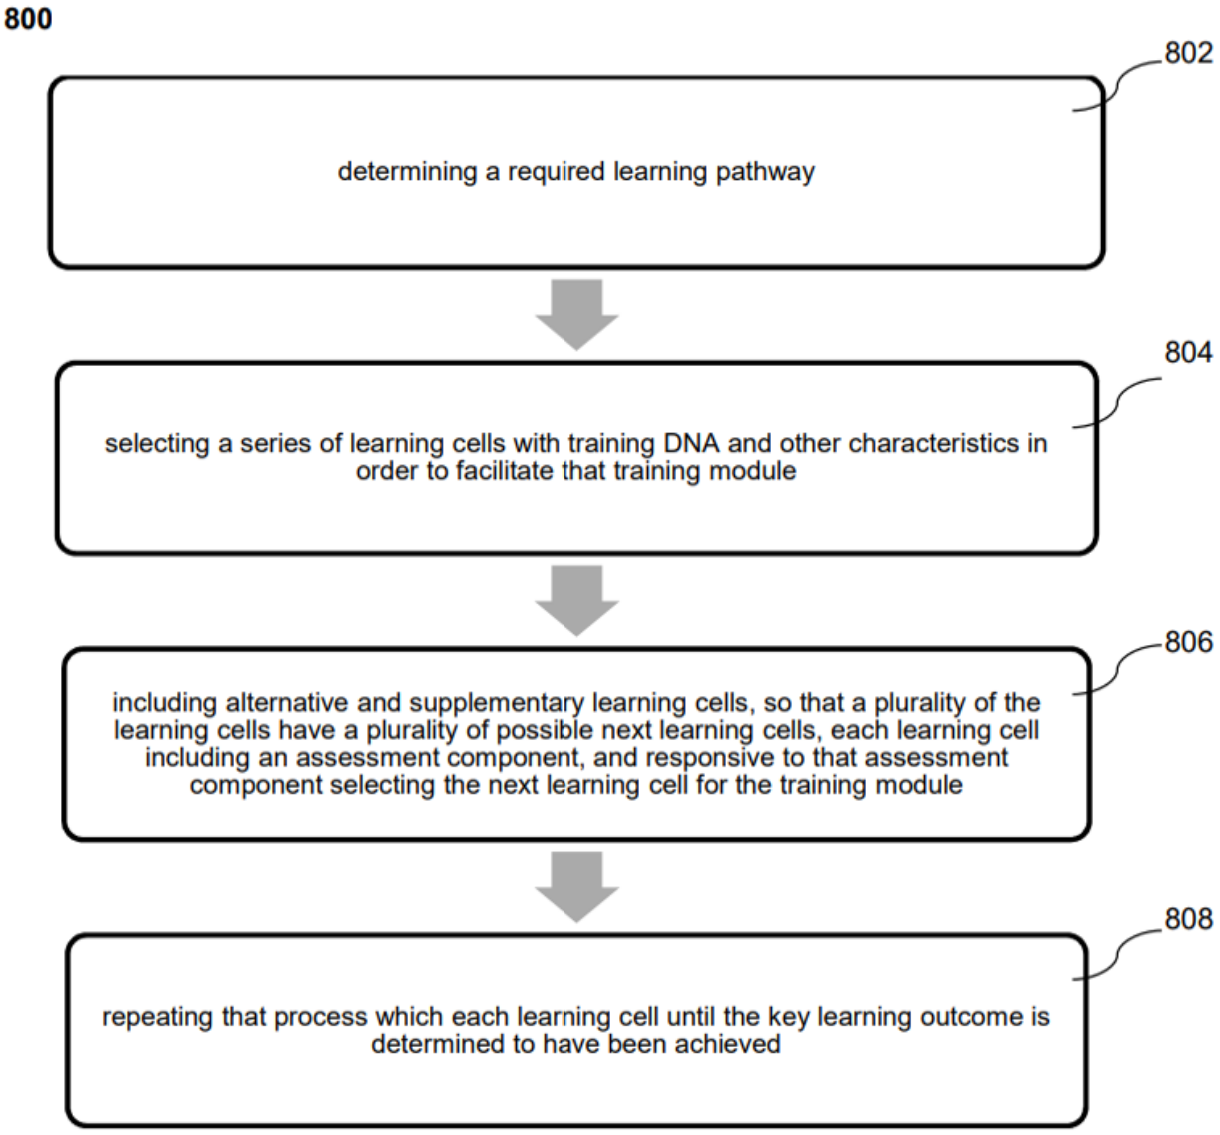

800
802
determining a required learning pathway
804
selecting a series of learning cells with training DNA and other characteristics in order to facilitate that training module
806
including alternative and supplementary learning cells, so that a plurality of the learning cells have a plurality of possible next learning cells, each learning cell including an assessment component, and responsive to that assessment component selecting the next learning cell for the training module
808
repeating that process which each learning cell until the key learning outcome is determined to have been achieved
