

CONFERENCE SYSTEM

[ABSTRACT]

A conference system (10) includes: a first loudspeaker device (20) which outputs a masking sound for masking a sound in a teleconference to make the sound less audible to a person who is not participating in the teleconference; a conference device (22) which is used to hold the teleconference; a second loudspeaker device (24) which outputs a sound of an other party of the teleconference; an obtaining device (26) which obtains at least one of conference information or presence information, the conference information relating to the teleconference, the presence information indicating whether or not a person who is not participating in the teleconference is present at a predetermined place; and a control device (36) which controls the first loudspeaker device (20) based on the at least one of the conference information or the presence information.
