

ABSTRACT

Implementations of the present application disclose a published information processing method and device, and an information publishing system. The method includes the following: obtaining information to be published, and determining
5 whether the information to be published is the first piece of published information corresponding to a publishing service item; if the determining result is yes, calculating an encryption value of predetermined initial information by using a predetermined encryption algorithm, and adding the encryption value of the predetermined initial information to the information to be published; or otherwise, calculating, by using a
10 predetermined encryption algorithm, an encryption value of encrypted data including the last published information preceding the information to be published, and adding the encryption value of the encrypted data to the information to be published; and displaying, based on a predetermined format, the information to be published to which the encryption value is added. By using the method or device implementations of the
15 present application, difficulty in tampering with published information can be increased, originality and integrity of the published information are ensured, and credibility of the published information is greatly improved.
