CARD BLOCKING SYSTEM AND PROCESS

ABSTRACT

The present invention includes a user identification ("UID") based card blocking system and process for allowing a card holder (referred to herein as a "user" of the UID blocking system) to prevent future transactions from being performed with one or more payment cards, each issued by a corresponding issuing financial institution (referred to as an "issuer") and associated with a particular card entity (such as MasterCard) by the use of a unique user identification code (UID Code) and corresponding identification credentials.
