

ABSTRACT

Disclosed in embodiments of the present invention are an access control
5 method and a related product. The method comprises: a user equipment obtains access
category information of an access policy for uplink access, the access category
information at least comprising first access category information separately defined
by an access layer AS entity; and the user equipment initiates uplink access according
to the access category information. The embodiments of the present invention help to
10 reduce reservation overheads of access policy information of an NAS layer, reduce
signaling overheads between the NAS layer and an AS layer and improve the access
control efficiency of a user equipment in an NR system.
