FIG. 3

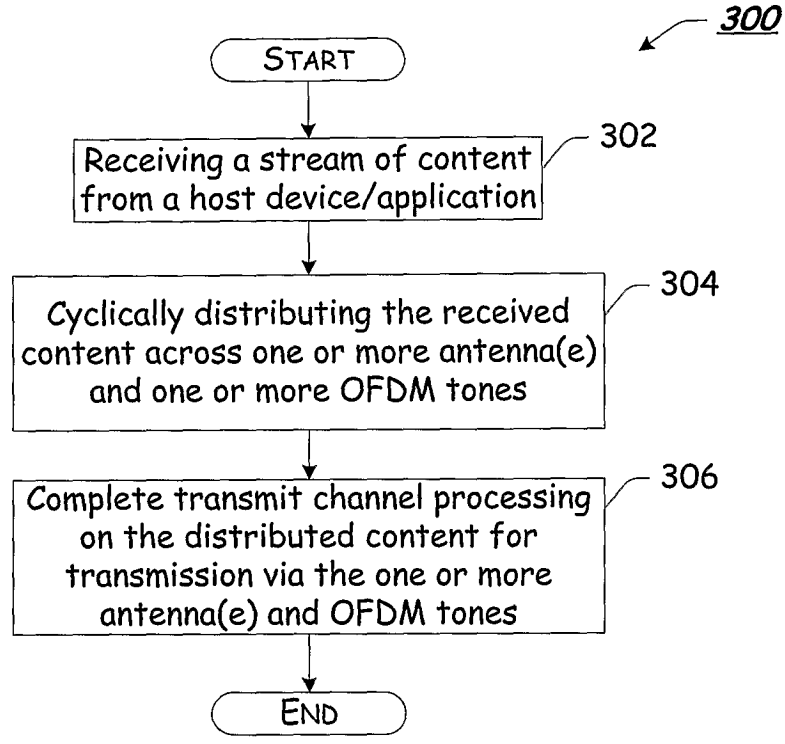

300
START
Receiving a stream of content from a host device/application
302
Cyclically distributing the received content across one or more antenna(e) and one or more OFDM tones
304
Complete transmit channel processing on the distributed content for transmission via the one or more antenna(e) and OFDM tones
306
END

FIG. 4

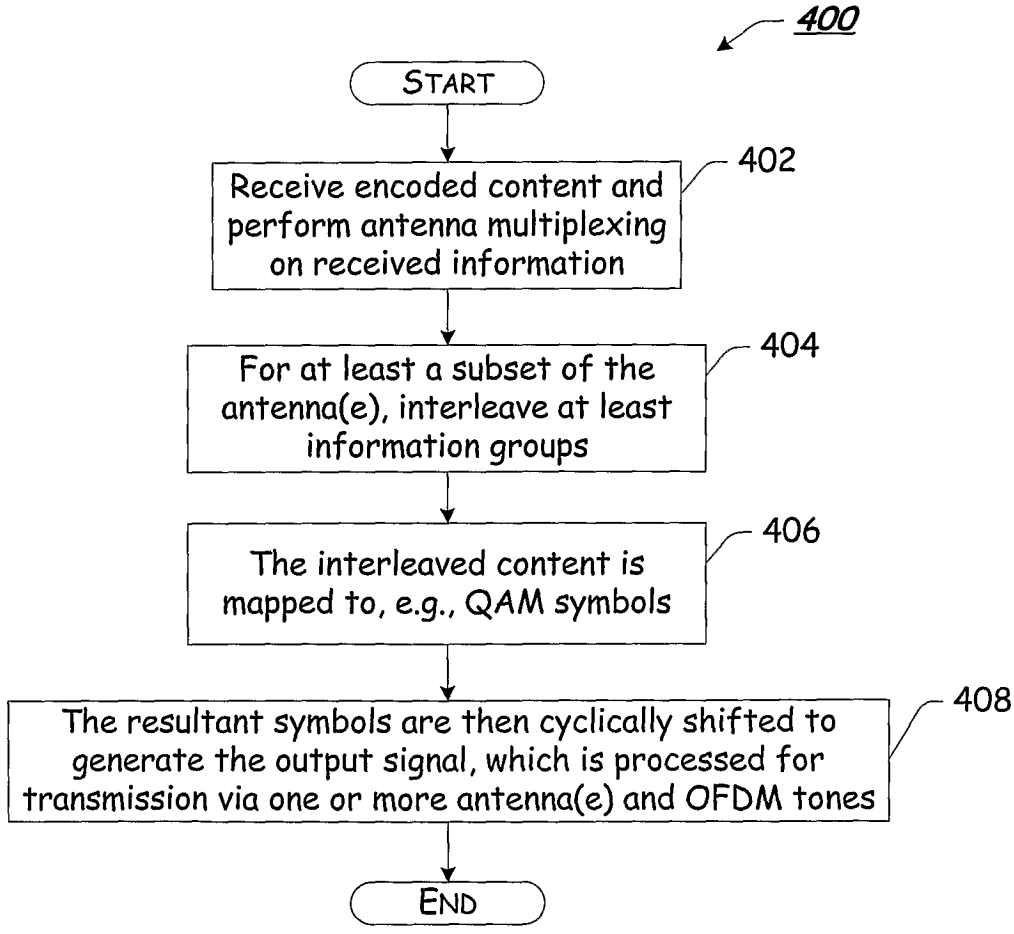

400
START
Receive encoded content and perform antenna multiplexing on received information
402
For at least a subset of the antenna(e), interleave at least information groups
404
The interleaved content is mapped to, e.g., QAM symbols
406
The resultant symbols are then cyclically shifted to generate the output signal, which is processed for transmission via one or more antenna(e) and OFDM tones
408
END
