

COMMUNICATION APPARATUS AND DEVICE

ABSTRACT

5 Embodiments of the present application provide a communication apparatus and a device
comprising the communication apparatus. The communication apparatus comprises a phase
modulation circuit, a charging circuit, and an antenna; the phase modulation circuit is
configured to perform phase adjustment on an electromagnetic signal; the charging circuit is
configured to convert the electromagnetic signal into electric energy; the antenna is configured
10 to receive the electromagnetic signal; the antenna is connected to the phase modulation circuit,
and the electromagnetic signal is transmitted to the phase modulation circuit by means of the
antenna; and the antenna is connected to the charging circuit, and the electromagnetic signal is
transmitted to the charging circuit by means of the antenna.
