

ABSTRACT

Provided is an antifouling coating composition comprising: a silicon atom-containing resin; and a thermoplastic resin other than the silicon atom-containing resin.

- 5 The silicon atom-containing resin includes a constituent unit (A) having at least one kind of silicon atom-containing group selected from the group consisting of a group represented by a formula (I), a group represented by a formula (II), a group represented by a formula (III), and a group represented by a formula (IV). The thermoplastic resin includes a thermoplastic resin having a weight average molecular weight of greater
- 10 than or equal to 1,000. A content of the thermoplastic resin having a weight average molecular weight of greater than or equal to 1,000 is greater than or equal to 6.0 parts by mass and less than or equal to 11.0 parts by mass with respect to 100 parts by mass of the silicon atom-containing resin.
