**ABSTRACT**

A triglyceride for use in therapy or as a nutritional supplement, or a composition containing a triglyceride, wherein the triglyceride comprises a fatty acid selected from gamma-linolenic acid and the n-6 EPAs naturally derived therefrom and stearidonic acid and the n-3 EFAs naturally derived therefrom, forming a triple ester with glycerol or alternatively forming a double ester in which the other esterifying acide is a single residue of linoleic acid, with the proviso that the di-gammalinolenoyl-mono-linoleoyl glyceride if selected is used as a preparation containing more than 20% by weight thereof.
