(54) Title: A GALLEY UNIT

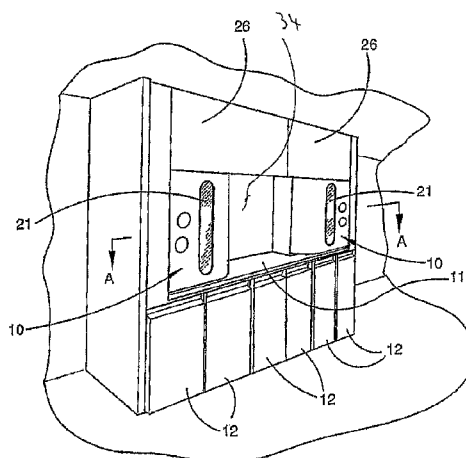

FIGURE 1

(57) Abstract: A multi-functional galley unit suitable for aircraft is disclosed. The galley unit includes two display compartments for food and other items (such as glasses) positioned above a bench top. Each display compartment comprises a main section in the form of a rear cabinet and a front door that can be swung between a closed orientation for storing items and an opened orientation in which the items are displayed and passengers can select and remove items from the compartments as desired. When the doors are in the closed position, cabin crew have full access to the bench top to assist in the preparation and serving of meals.
