

ABSTRACT

5 Provided are a data transmission method, a terminal device and a network
device. The method comprises: a terminal device receiving indicator information, said
indicator information being used for the terminal device to determine a first
transmission power for uplink data in a target time unit; the terminal device
determining the first transmission power according to the indicator information; the
10 terminal device sending uplink data to a first network device in accordance with the
first transmission power in the target time unit. A data transmission method embodied
in the present invention can effectively increase a data transmission success rate.
