(54) Title: METHOD AND APPARATUS OF RESOLVING PCI CONFUSION FOR PROVIDING INBOUND MOBILITY TO CLOSED SUBSCRIBER GROUP

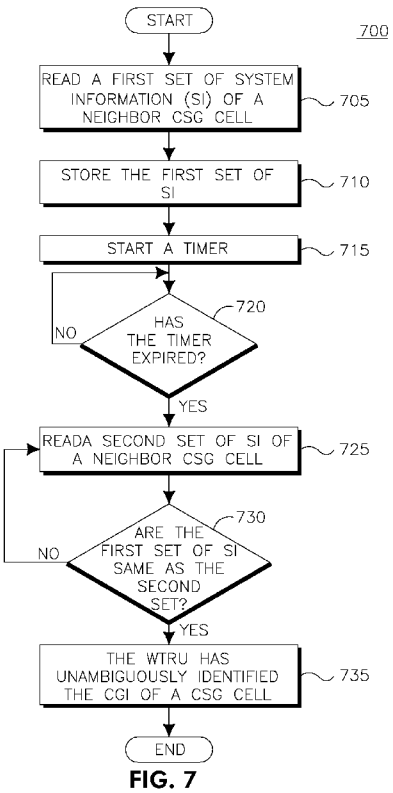

FIG. 7

(57) Abstract: Method and apparatus for providing inbound mobility to closed subscriber group (CSG) and hybrid cells are described. A wireless transmit/receive unit (WTRU) reads (705) a first set of system information of a neighbor closed subscriber group CSG including cell global identity CGI and a physical-cell identity PCI. A timer is then started (715). System information is re-read (725) after expiry of said timer (720). The WTRU has unambiguously identified the CGI of a CSGcell (735) if the first set and the second set of information are the same (730).
