

ABSTRACT

This application relates to a replenishment method and apparatus, a computer device, and a storage medium. The method includes: obtaining a replenishment order, and determining a mapping relationship between goods information of replenishment goods in the replenishment order and a storage space of a put wall, where the mapping relationship is used for instructing to correspondingly place target replenishment goods into a target storage space of the put wall; and determining a target inventory box corresponding to the target replenishment goods placed in the target storage space of the put wall, where the target inventory box is used for loading the target replenishment goods. The use of the method improves the replenishment efficiency.
