

Abstract

Method for Evaluating Ability of Cells to Grow Into Sheet

5 Provided are a method and a system for evaluating
the ability of cells to grow into a sheet, the method
including: (1) a step of examining cell cultures growing
into a sheet to determine their impedance and/or
electrical resistance or numerical values relating
10 thereto; (2) a step of comparing the numerical values
determined by Step (1) with reference values; and (3) a
step of judging, based on the results of comparison
obtained in Step (2), the ability of cells to grow into a
sheet.
