

Abstract

Double chip tray, chip tray, and game management system

5 There is provided a game management system that can manage
games using RFID tags built into chips even when multiple types of
chips are housed in a chip tray, and a double chip tray used for the
system. A chip tray (3) is a double chip tray equipped with a chip
tray reader (33) capable of reading two types of chips of different
10 shapes and/or sizes that incorporate RFID tags (71, 81), namely round
chips (7) and plaque chips (8), an upper chip holder (31) that can
hold chips, and a lower chip holder (32) that can hold chips. The
chip tray reader (33) is configured to read the RFID tags (71, 81)
of the two types of chips held in the chip tray (3), and is capable
15 of determining the respective amounts.
