ABSTRACT

A SYSTEM AND METHOD FOR HEATING LIQUIDS IN A VEHICLE

The present invention provides users with a system and method for heating fluids in a vehicle. The system and method allow users to operate a vehicle-based dish washing facility which is able to utilise heated water. The system and method allow the vehicle-based dish washing facility to be deployed at desired/required locations, and does not require secondary power sources (and corresponding costs) to power the vehicle-based dish washing facility.
