

CLAIMS

1. An authorization token batch-revoking method for a third-party application, wherein the method comprises:

determining a third-party application needing a plurality of authorization tokens to be revoked;

obtaining a current moment, and setting a time validity attribute value for the determined third-party application, so the time validity attribute value equals the current moment;

receiving the plurality of authorization tokens provided by the third-party application;

obtaining a validity attribute value of each of the plurality of authorization tokens;

determining whether the obtained validity attribute value is valid or not;

in response to determining that the obtained validity attribute value is valid, obtaining a validation moment of each of the plurality of the authorization tokens and the time validity attribute value of the third-party application; and

determining that the plurality of the authorization tokens are invalid if the obtained validation moment of each of the plurality of the authorization tokens are earlier than the obtained time validity attribute value, otherwise, determining that the plurality of the authorization tokens are valid.

2. An authority revoking device configured to perform any one of the steps of claim 1.
