ABSTRACT

Disclosed herein are a system and a method including receiving a request for changing a delivery date of a purchased vehicle, and selecting, among a plurality of planned vehicles for which production planning and delivery dates have been previously determined, a target vehicle. Exchanging the delivery date of the purchased vehicle with a delivery date of the target vehicle may not affect delivery dates of other planned vehicles of the plurality of planned vehicles. The system and method may further include exchanging the delivery date of the purchased vehicle with the delivery date of the target vehicle, and adjusting a vehicle production schedule according to the exchanged delivery dates.
