

ABSTRACT

The present disclosure provides a video processing method and apparatus, a device, and a storage medium. The method comprises: upon receipt of a preset combined photographing operation on a target video, displaying a combined photographing page, wherein a photo album portal is provided on the combined photographing page; in response to a trigger operation on the photo album portal, displaying a photo album page; and then obtaining the user material on the basis of the photo album page, and generating a combined photographing result video on the basis of the user material and the target video. Therefore, according to the video processing method provided in embodiments of the present disclosure, the combined photographing effect of the target video and the user material selected from the photo album page can be realized on the basis of the combined photographing function, and the combined photographing function is enriched, thereby improving the user experience.
