(54) Title: ASSET-BACKED TOKENIZATION PLATFORM

FIG. 2

(57) **Abstract:** Systems, methods and apparatus relating to asset based tokens are described. An example apparatus may include a tokenization controller to implement a tokenization user interface where the tokenization controller includes a token definition circuit to interpret a token description in response to user operations. The example apparatus may further include an asset definition circuit to interpret an asset class description in response to user operations and an asset backing circuit to interpret a token link description including a token performance representation corresponding to a beneficial characteristic of at least one asset of the asset class description, and to generate at least one asset class linked token in response to the token link description and the asset class description. The example apparatus may further include a token deployment circuit to expose the at least one asset class linked token to a token marketplace system.
