DEVICE AND METHOD FOR TRACKING AN UNDERWATER VEHICLE

ABSTRACT

In a device and a method for tracking an underwater vehicle (11), a platform (13) having a tracking apparatus (15) for determining instantaneous positions of the underwater vehicle (11) is inserted into the water and its submerged position is spatially stabilized. To this end, the platform (13) has maneuver drives (18, 19) which act horizontally and vertically and are arranged in control loops.
