

MOUNTING METHOD AND CUTTING APPARATUS

ABSTRACT

A mounting method includes a storing step of storing a plurality of cutting blades on a storage tray having a plurality of storage regions for storing the cutting blades, a replacement product position identifying step of reading identification marks on the cutting blades stored on the storage tray with a reading unit and identifying which storage regions the cutting blades to be mounted in a cutting apparatus are stored in on the basis of the read identification marks, a positioning step of positioning the storage tray on which the cutting blades are stored in a consumable product replacing position, and after the positioning step has been carried out, a mounting step of mounting one of the cutting blades from the storage tray in the cutting apparatus with a replacing device on the basis of the storage regions identified in the replacement product position identifying step.
