

METHOD AND SYSTEM FOR DISPLAYING USER ACTIVITIES BASED ON
GEOGRAPHICAL LOCATION INFORMATION, AND COMPUTER STORAGE
MEDIUM

ABSTRACT

The present invention relates to a method and system for displaying user activities based on geographical location information, and a computer storage medium, the method comprising the following steps: an SNS server obtaining personal activities information submitted by a first SNS user and the geographical location information of the first SNS user submitting the personal activities information; establishing a personal activities information database of the first SNS user according to the personal activities information, the geographical location information and the identification number of the first SNS user, and storing the database in the SNS server; the SNS server searching for the friend list of the first SNS user in the database, notifying a second SNS user on the friend list of the first SNS user of the personal activities information, the geographical location information and the identification number of the first SNS user and displaying in the friend status of the second SNS user. The method, system and computer storage medium facilitate the second SNS user to search for the personal activities of friends in different geographical locations.
