SYSTEM AND METHOD FOR OPTION COMMODITY RECOMMENDATION

ABSTRACT OF THE DISCLOSURE

A system for option commodity recommendation. The system includes a network interface, a processing unit, and an option trade unit. The processing unit selects a plurality of candidate option commodities from the option trade unit according to the investment direction and the predicted stock trend received via the network interface, and calculates a possible return for each candidate option commodity under a win probability. The processing unit selects the candidate option commodity with the highest return as a recommendation option commodity under the win probability.
