

A POCKET AND TABLE WATCH WITH A  
SUSPENSION AND SUPPORT DEVICE

ABSTRACT

A watch (1) whose case (3) comprises a groove (7) on its periphery is mounted in a removable manner in a suspension and support device consisting of two parts (11 and 12) attached by a hinge (13). The first part (11) has the shape of an resilient open ring which engages in the groove of the case. The second part (12) is substantially flat and comprises suspension means opposite to the hinge (13), and a shoulder capable of stopping it at an acute angle with respect to the first part. In this case, the assembly may be placed on a table (34) or any other horizontal surface.
