TRANSACTION AUTHENTICITY VERIFICATION METHOD AND SYSTEM, AND STORAGE MEDIUM

说 明 书 摘 要

本说明书提供一种交易的真实性验证方法、系统及存储介质。其中，在所述方法中，计算设备可以获得目标交易的交易信息、所述目标交易对应的交易证明文档，并从所述交易证明文档中提取得到文档关键信息，还可以获得预先基于事实数据构建的知识图谱，进而，通过大模型基于所述交易信息、所述文档关键信息和所述知识图谱，对所述目标交易的真实性进行验证，得到真实性验证结果。

This specification provides a transaction authenticity verification method and system, and a storage medium. In the method, a computing device can obtain transaction information of a target transaction and a transaction certificate document corresponding to the target transaction, and extract document key information from the transaction certificate document; and can further obtain a knowledge graph pre-constructed based on fact data, and further verify authenticity of the target transaction based on the transaction information, the document key information, and the knowledge graph by using a large model, to obtain an authenticity verification result.
