

SAFETY CABINET SYSTEM, CLEAN BENCH SYSTEM, SAFETY CABINET AND CLEAN BENCH

ABSTRACT OF THE DISCLOSURE

5 The present invention performs recording of operation details and making outside
contact without causing cross-contamination or lowering of working efficiency. The
present invention has a safety cabinet for handling a subject of an object in a clean
environment and a server connected with the safety cabinet via a communication line.
The safety cabinet has a controlling unit, a display unit for displaying at least either of a
10 standard operation procedure and a standard protocol indicating standard operation details
and an operation procedure that are executed in the safety cabinet, and a microphone and
a foot pedal for accepting input of an operation information from an operator. The
operation information inputted by the operator is sent to the server and stored there. A
clean bench may be used instead of the safety cabinet.
