
ABSTRACT

Use of FA-Type Lipid Compounds in Preparation of Nucleic Acid Delivery

Reagent and Related Product

5

A use of one or more lipid compounds in the delivery of nucleic acids, and a lipid nucleic acid mixture, pharmaceutical composition or kit comprising the lipid compounds and nucleic acids. The lipid compounds provided above can promote the absorption, particularly oral absorption, of nucleic acids, and promote the entry of

10 nucleic acids into target sites in a subject in need thereof.
