

SURFING WAVE-MAKING APPARATUS AND SURFING PRACTICE FACILITY EQUIPPED WITH SAME

Abstract

To provide a surfing wave-making apparatus that is capable of making the so-called tubular plunging breakers which are suitable for surfing.

The present invention comprises: a container body 110 that is open at the front thereof, is equipped with at least a bottom part, and is capable of trapping water in part of the inner space thereof; and a moving track 120 that allows the container body 110 to travel thereon and that is equipped with a slope surface track 121 and an in-pool track 123. The container body 110 falls along the slope surface track 121, plunges into water of the pool, and travels on the in-pool track 123, only the water in the container body 110 is thrust forward as an isolated traveling wave.
