

Abstract

A rod-shaped body (10) is used to lift a cover (103) so as to detach the cover from a bottom plate (101), together with which the cover (103) forms a reactor (100). The rod-shaped body (10) includes a first part (11) to be inserted into a bottom plate-side hole (102a) provided in a surrounding area of the bottom plate (101) and a second part (12) to be inserted into a cover-side hole (104a) disposed in a surrounding area of the cover (103) so as to face the bottom plate-side hole (102a).
