

【ABSTRACT】

To provide a heating apparatus for a heat treatment machine configured to accurately bring each ceramic member into contact with a set moxibustion point, the present invention provides a heating apparatus for a heat treatment machine including a base plate, an ascending and descending member of which one end is coupled to the base plate through a coupler, a plurality of ceramic members provided in the ascending and descending member, a first driving part configured to raise and lower the ascending and descending member, and a second driving part configured to convey the base plate in a horizontal direction.
