

OPENING/CLOSING DEVICE, SCAFFOLD, AND MARINE VESSEL

Abstract

An opening/closing device (24) for closing an opening (25) that is formed midway along a scaffold unit (9), includes: a main portion (26) displaceable between a closed position at which the opening (25) is closed from above, and an open position at which the opening (25) is open, the open position being located above the closed position; and, upon the main portion (26) being in the open position, a restricting portion (30) extending a direction intersecting the direction of ingress to the opening (25) side of the user and in a direction along the scaffold unit (9) to restrict ingress to the opening (25) side of the user.
