CASSETTE FOR RECEIVING AT LEAST ONE COMPACT DISC

ABSTRACT

A cassette for receiving a compact disc has a housing including a base (1) and a cover (2) whereby the cover (2) is pivotably connected with the pivot connection to the base (1) for opening and closing the housing. A plate insert (3) is positioned in the housing and has securing elements (4) for securing at least one compact disc thereat. The base (1) has a rectangular bottom (5) with opposite longitudinal edges. The base (1) has upwardly extending first sidewalls (6, 7) connected to the longitudinal edges. The cover (2) has a rectangular top wall (8) extending parallel to the bottom (5). The top wall (8) has opposite longitudinal edges with sidewalls (6, 7) connected thereto. The second sidewalls (7) extend downwardly when the housing is closed. The plate insert (3) has a rectangular base plate with opposite longitudinal edges. The rectangular base plate has lateral projections in a plane of the base plate at the longitudinal edges in an area where a compact disc secured at the plate insert.
