(54) Title: MESH NETWORKS

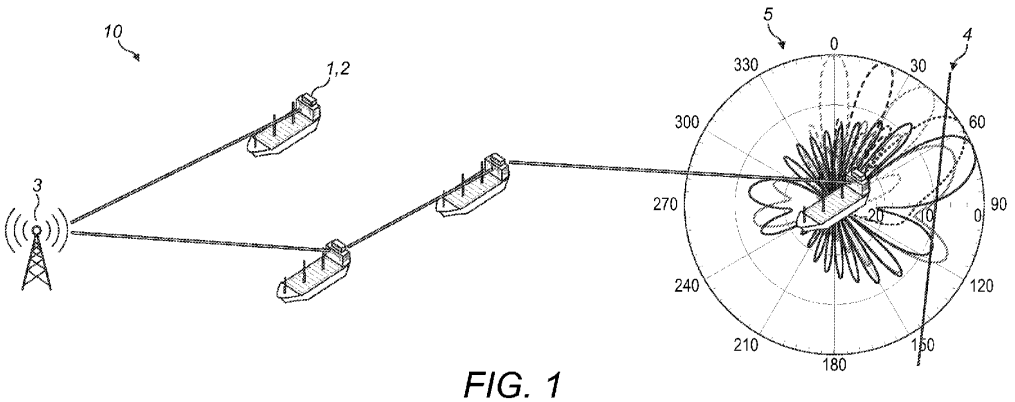

FIG. 1

(57) Abstract: A method of controlling emissions from a mobile node in a mesh network comprises obtaining positional data relating to the mobile node, comparing the positional data with a geographical emissions restriction requirement, determining a beam mask for the mobile node so as to meet the geographical emissions restriction requirement and controlling the emissions of the mobile node based on the beam mask. The method may be performed by a controller remote from the mobile node. The controller may have out of band connectivity with the mobile node via one or more alternative networks other than the mesh network.
