(54) Title: INHALER DEVICE FOR INHALABLE LIQUIDS

FIGURE 5

(57) Abstract: The invention is directed to an inhaler device for inhalable liquids, in particular for the administration of inhalable volatile liquids such as halogenated volatile liquids, to a patient. According to particular embodiments, the inhaler device may include a liquid container for hermetically storing inhalable liquid; a wicking material for supporting inhalable liquid; a piercing member configured to pierce the liquid container, wherein the liquid container may be provided in a first position in which the piercing member does not engage the liquid container and inhalable liquid remains hermetically stored within the liquid container, and the liquid container may be displaced from the first position to a second position such that the piercing member pierces the storage container to release inhalable liquid onto the wicking material, whereby during inhalation inhalable liquid vapour from the wicking material is delivered to the patient.
