(54) Title: SYSTEMS AND METHODS FOR VERIFYING ASSET MANAGEMENT PERFORMANCE

FIG. 1

(57) Abstract: This disclosure relates to systems and methods for verifying asset management performance. The method involves algorithmically obtaining key data, such as a name identifier, portfolio identifier, research data, type, and a file containing portfolio details. This data is encrypted, and the file is hashed using a hashing algorithm to create a unique file hash. The method then creates an entry in a distributed ledger that includes the file hash at a specific time. Later, the same file can be received and verified by a second party comparing its hash to the ledger entry to establish its authenticity. The verified file, its status, and the initial time of entry are then displayed on a screen. This process can be repeated multiple times to maintain a live, continuous track record of the portfolio's performance over time, ensuring accuracy and transparency.
