(54) Title: TUBE LIKE DISPENSER PACKAGE AND INTEGRAL OUTLET FORMED FROM A SINGLE SHEET (57) Abstract An aperture forming structure, which when attached to or integrally formed in dispenser packages for flowable substances allows reclosure and single or multiple uses. The aperture forming structure includes a break-away tip member (34) of thermoformable plastic. The break-away tip (34) includes a hollow protrusion (32) from a surface. The intersection of the hollow protrusion and the surface is a fault-line (114). Rupturing of the fault-line (114) creates an aperture from which the contents of the dispenser package may exit.
