

ABSTRACT OF THE DISCLOSURE  
DATA DISTRIBUTION SYSTEM AND  
DATA BUSINESS GATEWAY SYSTEM  
FOR IMPLEMENTING THE DATA DISTRIBUTION SYSTEM

5

A data distribution system is provided in which plural systems participate and can trade data openly. Also, a data business gateway system with a junction function to enable liberalization of interactive data distribution between plural  
10 companies and promote data distribution is provided.

Gateway means with a data junction function is configured in which closed data supplied from a service company system and open data supplied from an open system are imported and imported data is normalized and managed, and if there is a  
15 request for access to data from a data receiving party, a decision is made as to whether or not to disclose normalized data and blended or mixed data thereof to the access requesting party and if it is decided that the data is disclosable, searched/extracted data is supplied so that  
20 liberalization of data distribution is promoted.
