(54) Title: CARD GAME INTERFACE

FIG. 2

(57) Abstract: Among other things, a system can include a card reader which identifies a value associated with a card being dealt. The system can also include an analysis system in communication with the card reader to receive data representing the value associated with a card being dealt. After at least a first round of cards are dealt the analysis system can calculate odds for each bet placed by one of one or more participants based on a predefined set of rules and the data received from the card reader. The system can also include a display system in communication with the analysis system. The display system can display the odds calculated by the analysis system.
