

ABSTRACT

5 The tilting sail system comprises a sail (2) which is displaceable between an operating position and a tilted position, a base (1) supporting the sail (2), said base (1) being rotatable between the operating position and the tilted position; a support (3), which supports said base (1) in an articulated manner; and a rack (4) attached to the base (1), which engages with a pinion (5), the pinion (5) driving the movement of said base (1) from the operating position to the tilted position, or vice versa. It allows providing a tilting sail system, which can be placed in an operating position and in a tilted position, allowing
10 the position of the sail to be varied in a simple and safe manner.
